

Recipe for Food Safety Success:

Collaboration, Leadership,
and Participation

Other Ways to View or Discuss:

- Build trust, be transparent, cultivate high quality relationships across industry(ies) and with regulatory partners
- Recognize the importance of our role as regulators while understanding the limitations
- Embrace innovation and ideas outside the regulator think tank (CFP is a great example of this approach)
- Champion accountability, ensure regulations are current and applicable, have robust data systems and leverage data to drive decision making and advocate for needs/changes

How do we maximize our impact:

- Implement approaches to minimize known constraints
- Honest interactions with industry
- Don't reinvent the wheel and use resources from other partners
 - ... Don't hold onto approaches that are not working
- Learn from the collection of mistakes we all make. Move forward
- Be active in various organizations, always be able to “phone a friend” and be a resource to others
